Protective rating of luminaire

Light distribution inwards

Protection class III: only suitable for very low voltage supply (<50V)

Luminaires are suitable for mounting on ordinary flammable materials, which have an inflammation point of at least 200° C / 392° F

Technical data is subject to change. Errors and omissions excepted 1) Net lumen output: Losses due to diffusers and reflectors are considered. Lumen values refer to an ambient temperature of max. 35° C / 95° F. 2) Weight of lights without remote technical unit or canopy.

A diagram of a cable-stayed bridge. A horizontal line represents the deck. A vertical line represents the tower. Several diagonal lines represent stay cables. One cable is highlighted in pink. A circle with the letter 'E' is at the bottom right corner of the diagram.

The diagram shows a horizontal rod of length  $a$  suspended from a ceiling. A string of length  $b$  is attached to the right end of the rod and hangs vertically. A mass  $m$  is attached to the bottom of the string. The rod is labeled 'a' and the string is labeled 'b'.

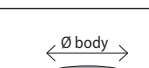

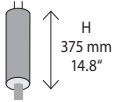

Diagram G shows a horizontal beam with a red weight hanging from its right end. The beam is supported by a fulcrum.

A diagram showing a laser pointer on a grey rectangular table. A red battery is connected to the laser pointer by a red wire. Three red lines representing the laser beam are shown emanating from the pointer. A circled 'K' is in the bottom right corner.
